

IMPORTANT INFORMATION REGARDING DISTRONIC PLUS

Distronic Plus is standard equipment on 2007 Mercedes-Benz models **S600** and **CL600**, and optional equipment on **S550**, **CL550** and **S65** models.

Distronic Plus is a radar based cruise control and safety braking system. The system emits a constant radar frequency at 24.125 GHz which causes continuous K band radar alert warnings in ALL brands and models of radar detectors, making ALL radar detectors unusable in a vehicle with Distronic Plus.

Please call your K40 regional manager for informationn regarding products that will work with these Mercedes options.

Note: Distronic Adaptive Cruise Control emits a frequency at 25.3 GHz (not a K band frequency) and does not cause false alert warnings in radar detectors.
